Chapter 1

Introduction

This document describes the usage of eYs3D Linux SDK

What's inside the SDK

Table 1.1 File List

Folder	Filename	Description
bin	All files	sample executables on Linux platform
console_tester	All files	a console programm demonstrating how to use the APIs defined in eSPDI.h
cfg	All files	configration files
	eSPDI.h	functions definitions
eSPDI	eSPDI_def.h	error/data type definitions
	eSPDI_←	SDK version declaration header
	version.h	
DMPreview	All files	a sample project demonstrating how to open
		multiple devices in an application

2 Introduction

Chapter 2

Class Index

2.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

AccelerationTag	7
APCImageType	7
CompassTag	8
DECIMATION_PARAMS	8
eSPCtrl_RectLogData	8
GyroTag	13
packet_s	
PointCloudInfo	14
POST_PROCESS_PARAMS	
tagAPC_STREAM_INFO	15
tagDEVINFORMATION	
tagDEVSEL	
tagKEEP_DATA_CTRL	15
tagZDTableInfo	16

4 Class Index

Chapter 3

File Index

3.1 File List

Here is a list of all documented files with brief descriptions:

eSPDI/eSPDI.h	
Functions definitions	17
eSPDI/eSPDI_def.h	
Error/data type definitions	10
eSPDI/eSPDI version.h	??

Chapter 4

Class Documentation

4.1 AccelerationTag Struct Reference

Public Attributes

- short **x**
- short y
- short z

The documentation for this struct was generated from the following file:

• eSPDI/eSPDI_def.h

4.2 APCImageType Struct Reference

Public Types

enum Value {
 IMAGE_UNKNOWN = -1, COLOR_YUY2 = 0, COLOR_RGB24, COLOR_MJPG,
 COLOR_UYVY, DEPTH_8BITS = 100, DEPTH_8BITS_0x80, DEPTH_11BITS,
 DEPTH_14BITS }

Static Public Member Functions

- static bool **IsImageColor** (APCImageType::Value type)
- static bool **IsImageDepth** (APCImageType::Value type)
- static APCImageType::Value **DepthDataTypeToDepthImageType** (WORD dataType)

The documentation for this struct was generated from the following file:

8 Class Documentation

4.3 CompassTag Struct Reference

Public Attributes

- short x
- short y
- short **z**

The documentation for this struct was generated from the following file:

· eSPDI/eSPDI_def.h

4.4 DECIMATION_PARAMS Struct Reference

Public Attributes

• int decimation_sub_sample_factor = 2

The documentation for this struct was generated from the following file:

• eSPDI/eSPDI_def.h

4.5 eSPCtrl_RectLogData Struct Reference

Public Attributes

```

float eSPCtrl_RectLogData::RotaMat[9]

4.5.1.27 RRotaMat

float eSPCtrl_RectLogData::RRotaMat[9]

4.5.1.28 TranMat

```
float eSPCtrl_RectLogData::TranMat[3]
```

Translation vector between the coordinate systems of the cameras. |[0]| |Xcr| |[1]| + |Ycr| => cr = right camera coordinate |[2]| |Zcr|

4.5.1.29 uByteArray

```
unsigned char eSPCtrl_RectLogData::uByteArray[1024]
```

union data defined as below struct { }

The documentation for this struct was generated from the following file:

• eSPDI/eSPDI def.h

4.6 GyroTag Struct Reference

Public Attributes

- short x
- short y
- short z

The documentation for this struct was generated from the following file:

• eSPDI/eSPDI_def.h

4.7 packet_s Struct Reference

Public Attributes

- int len
- · int serial
- · bool bisRGB
- · bool bisReady

```
union {
   unsigned char buffer_yuyv [2 *2560 *2560]
   unsigned char buffer_RGB [3 *2560 *2560]
};
```

The documentation for this struct was generated from the following file:

14 Class Documentation

4.8 PointCloudInfo Struct Reference

#include <eSPDI_def.h>

Public Attributes

- float centerX
- · float centerY
- · float focalLength
- float disparityToW [2048]
- int disparity_len
- WORD wDepthType
- int depth_image_edian
- float focalLength_K
- · float baseline_K
- float diff_K
- float slaveDeviceCamMat2 [9]
- float slaveDeviceRotaMat [9]
- float slaveDeviceTranMat [3]

4.8.1 Detailed Description

Parameters

M_dst	input camera matrix of RGB-lens, including intrinsic parameters, such as RectifyLog-CamMat2 (M3). The buffer size is 9.
R_dst_to_src	input rotation matrix of dst-lens to src-lens, dst is the camera at left side, src is the camera at right side, such as RectifyLog-RotaMat (R31). The buffer size is 9.
T_dst_to_src	input translation matrix of dst-lens to src-lens, such as RectifyLog-TranMat (T13). The buffer size is 3.

The documentation for this struct was generated from the following file:

eSPDI/eSPDI_def.h

4.9 POST_PROCESS_PARAMS Struct Reference

Public Attributes

- int spatial_filter_kernel_size = 5
- float spatial_filter_outlier_threshold = 16

The documentation for this struct was generated from the following file:

4.10 tagAPC_STREAM_INFO Struct Reference

Public Attributes

- · int nWidth
- · int nHeight
- BOOL bFormatMJPG

The documentation for this struct was generated from the following file:

• eSPDI/eSPDI_def.h

4.11 tagDEVINFORMATION Struct Reference

Public Attributes

- · unsigned short wPID
- · unsigned short wVID
- char * strDevName
- · unsigned short nChipID
- unsigned short nDevType

The documentation for this struct was generated from the following file:

• eSPDI/eSPDI_def.h

The documentation for this struct was generated from the following file:

Chapter 5

File Documentation

5.1 eSPDI/eSPDI.h File Reference

functions definitions

```
#include "eSPDI_def.h"
#include "eSPDI_version.h"
#include <stdlib.h>
Include dependency graph for eSPDI.h:
```

Functions

- int APC_Init (void **ppHandleEYSD, bool blsLogEnabled)
 - entry point of EYSD camera SDK including 1.create a CEYSD class for accessing oneming APIs 2.find out EYSD devices 3.create a CVideoDevice class for video streaming and hardware access
- int APC_FindDevice (void *pHandleEYSD)
 - find out all EYSD USB devices by PID, VID and ChipID, also remember device types
- void APC_Release (void **ppHandleEYSD)
 - release resource that APC_Init had allocated
- int APC_RefreshDevice (void *pHandleEYSD)
 - refresh all EYSD UVC devices
- int APC_SwitchBaseline (int index)

Swich the baseline index.

18 File Documentation

bool APC_IsMLBaseLine (void *pHandleEYSD, PDEVSELINFO pDevSelInfo)

Check the device is multiple baseline device.

int APC_DoFusion (unsigned char **pDepthBufList, double *pDepthMerge, unsigned char *pDepthMerge ←
Flag, int nDWidth, int nDHeight, double fFocus, double *pBaseline, double *pWRNear, double *pWRFar,
double *pWRFusion, int nMergeNum, bool bdepth2Byte11bit, int method)

Do Fusion Merge.

- int APC_GetDeviceInfo (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, DEVINFORMATION *pdevinfo)
 get informations of EYSD UVC devices, see DEVINFORMATION
- int APC_GetDeviceInfoMBL_15cm (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, DEVINFORMATION *pdevinfo)

get informations of EYSD UVC devices, see DEVINFORMATION

int APC_SelectDevice (void *pHandleEYSD, int dev_index)

do not support currently

• bool APC IsInterleaveDevice (void *pHandleEYSD, PDEVSELINFO pDevSelInfo)

check module support interleave function or not

• int APC_EnableInterleave (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, bool enable)

enable or disable interleave function

- int APC SetPixelFormat (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, PIXEL FMT fmt)
- int APC_SetControlCounterMode (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, unsigned char nValue)
 enable or disable interleave function
- int APC_GetControlCounterMode (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, unsigned char *n↔ Value)

enable or disable interleave function

- int APC_GetSensorRegister (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, int nld, unsigned short address, unsigned short *pValue, int flag, SENSORMODE INFO SensorMode)
- int APC_SetSensorRegister (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, int nld, unsigned short address, unsigned short nValue, int flag, SENSORMODE_INFO SensorMode)

set sensor register value

int APC_GetFWRegister (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, unsigned short address, unsigned short *pValue, int flag)

get firmware register value

• int APC_SetFWRegister (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, unsigned short address, unsigned short nValue, int flag)

set firmware register value

- int APC_SetRootCipher (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, const char *cipher)
 enter root cipher
- int APC_GetHWRegister (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, unsigned short address, unsigned short *pValue, int flag)

get hardware register value

int APC_SetHWRegister (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, unsigned short address, unsigned short nValue, int flag)

set hardware register

int APC_GetMultiBytesHWRegister (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, unsigned short address, unsigned char *Data, int size, int flag)

set hardware register

• int APC_SetMultiBytesHWRegister (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, unsigned short address, unsigned char *Data, int size, int flag)

set hardware register

set hardware register

- int APC GetAETarget (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, unsigned short *EV)
- int APC_SetAETarget (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, int index, float *EV)
- int APC_GetBusInfo (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, char *pszBusInfo, int *pActual← Length)

get the firmware version of device, the version is a string

• int APC_GetFwVersion (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, char *pszFwVersion, int n← BufferSize, int *pActualLength)

get the firmware version of device, the version is a string

 int APC_GetPidVid (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, unsigned short *pPidBuf, unsigned short *pVidBuf)

get PID(product ID) and VID(vendor ID) of device

int APC_SetPidVid (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, unsigned short *pPidBuf, unsigned short *pVidBuf)

set PID and VID to device

 int APC_GetSerialNumber (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, unsigned char *pData, int nbufferSize, int *pLen)

get device serial number

int APC_SetSerialNumber (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, unsigned char *pData, int nLen)

set serial number to device

int APC ResetUNPData (void *pHandleEYSD, PDEVSELINFO pDevSelInfo)

Reset the UNProtection area's datum.

• int APC_GetYOffset (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, BYTE *buffer, int BufferLength, int *pActualLength, int index)

get Y offset (file ID 30+) value

• int APC_GetRectifyTable (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, BYTE *buffer, int BufferLength, int *pActualLength, int index)

get rectify values (file ID 40+) from flash

 int APC_GetZDTable (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, BYTE *buffer, int BufferLength, int *pActualLength, PZDTABLEINFO pZDTableInfo)

get disparity and Z values from flash

• int APC_GetLogData (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, BYTE *buffer, int BufferLength, int *pActualLength, int index, CALIBRATION_LOG_TYPE type)

get log data from flash

• int APC_GetUserData (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, BYTE *buffer, int BufferLength, USERDATA SECTION INDEX usi)

get user data from flash

• int APC_SetYOffset (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, BYTE *buffer, int BufferLength, int *pActualLength, int index)

set Y offset values

• int APC_SetRectifyTable (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, BYTE *buffer, int BufferLength, int *pActualLength, int index)

set rectify values to flash

• int APC_SetZDTable (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, BYTE *buffer, int BufferLength, int *pActualLength, PZDTABLEINFO pZDTableInfo)

set disparity and Z values to flash

• int APC_SetLogData (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, BYTE *buffer, int BufferLength, int *pActualLength, int index)

set log data to flash

• int APC_SetUserData (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, BYTE *buffer, int BufferLength, USERDATA SECTION INDEX usi)

set user data to flash

read firmware code(.bin) form flash The firmware code is the combination of boot loader, firmware body and plug-in data. This input buffer length has to match with the flash data type

20 File Documentation

write firmware code(.bin) to flash The firmware code is the combination of boot loader, firmware body and plug-in data, also can keep original functions(Serial Number, Sensor Position, RectificationTable, ZD Table and CalibrationLog) on camera flash by KEEP_DATA_CTRL control

int APC_GetDevicePortType (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, USB_PORT_TYPE *pU

SB Port Type)

Get Device USB-port-type.

int APC_GetDeviceResolutionList (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, int nMaxCount, AP←
 C_STREAM_INFO *pStreamInfo0, int nMaxCvoidount1, APC_STREAM_INFO *pStreamInfo1)

get the device resolution list

- int APC_Setup_v4l2_requestbuffers (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, int cnt)
 Setup v4l2 request buffers, default = 4.
- int APC_OpenDevice (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, int nEP0Width, int nEP0Height, bool bEP0MJPG, int nEP1Width, int nEP1Height, DEPTH_TRANSFER_CTRL dtc=DEPTH_IMG_NON_T← RANSFER, bool bIsOutputRGB24=false, void *phWndNotice=0, int *pFPS=0, CONTROL_MODE cm=IM← AGE SN NONSYNC)

the implement layer to open EYSD camera device by V4L2(https://en.wikipedia.org/wiki/Video4← Linux), can open color and depth at one time call, do functions as below,

int APC_OpenDevice2 (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, int nEP0Width, int nEP0Height, bool bEP0MJPG, int nEP1Width, int nEP1Height, DEPTH_TRANSFER_CTRL dtc=DEPTH_IMG_NON_T ← RANSFER, bool bIsOutputRGB24=false, void *phWndNotice=0, int *pFPS=0, CONTROL_MODE cm=IM ← AGE_SN_NONSYNC)

the implement layer to open EYSD camera device by V4L2(https://en.wikipedia.org/wiki/Video4← Linux), can open color and depth at one time call, do functions as below,

int APC_OpenDeviceMBL (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, int nEP0Width, int nEP0←
Height, bool bEP0MJPG, int nEP1Width, int nEP1Height, DEPTH_TRANSFER_CTRL dtc=DEPTH_IMG←
_NON_TRANSFER, bool blsOutputRGB24=false, void *phWndNotice=0, int *pFPS=0, CONTROL_MODE
cm=IMAGE_SN_NONSYNC)

the implement layer to open Multiple Base Line EYSD camera device by V4L2(https://en.wikipedia. ← org/wiki/Video4Linux), can open color and depth at one time call, do functions as below,

• int APC CloseDeviceMBL (void *pHandleEYSD, PDEVSELINFO pDevSelInfo)

close Multiple Base Linedevice and free resource

int APC_CloseDevice (void *pHandleEYSD, PDEVSELINFO pDevSelInfo)

close device and free resource

int APC CloseDeviceEx (void *pHandleEYSD, PDEVSELINFO pDevSelInfo)

close device and free resource for warm reset

get color or depth pin image by issuing V4L2's IOCTL to get frame data

• int APC_GetColorImage (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, BYTE *pBuf, unsigned long int *pImageSize, int *pSerial=0, int nDepthDataType=0)

get color image by issuing V4L2's IOCTL to get frame data

int APC_GetColorImageWithTimestamp (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, BYTE *pBuf, unsigned long int *pImageSize, int *pSerial, int nDepthDataType, int64_t *pcur_tv_sec, int64_t *pcur_tv_cusec)

get color image by issuing V4L2's IOCTL to get frame data

• int APC_GetDepthImage (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, BYTE *pBuf, unsigned long int *pImageSize, int *pSerial=0, int nDepthDataType=0)

get depth image by issuing V4L2's IOCTL to get frame data

int APC_GetDepthImageWithTimestamp (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, BYTE *pBuf, unsigned long int *pImageSize, int *pSerial, int nDepthDataType, int64_t *pcur_tv_sec, int64_t *pcur_tv_cusec)

get color image by issuing V4L2's IOCTL to get frame data

- int APC_SetupBlock (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, bool enable) get color or depth pin image by issuing V4L2's IOCTL to get frame data
- int APC SetupContinueMode (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, bool enable)
- int APC_Get_Color_30_mm_depth (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, BYTE *pBuf, unsigned long int *pImageSize, int *pSerial=0, int nDepthDataType=0)

get color or depth pin image by issuing V4L2's IOCTL to get frame data

• int APC_Get_60_mm_depth (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, BYTE *pBuf, unsigned long int *pImageSize, int *pSerial=0, int nDepthDataType=0)

get color or depth pin image by issuing V4L2's IOCTL to get frame data

• int APC_Get_150_mm_depth (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, BYTE *pBuf, unsigned long int *pImageSize, int *pSerial=0, int nDepthDataType=0)

get color or depth pin image by issuing V4L2's IOCTL to get frame data

int APC_Get2Image (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, BYTE *pColorImgBuf, BYTE *p
 DepthImgBuf, unsigned long int *pColorImageSize, unsigned long int *pDepthImageSize, int *pSerial=0, int
 *pSerial2=0, int nDepthDataType=0)

get color and/or depth pin images see APC_GetImage for detailed description

- int APC_Get2ImageWithTimestampNoSplit (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, BYTE *pBuf, unsigned long int *pImageSize, int *pSerial, int64_t *pcur_tv_sec, int64_t *pcur_tv_usec, bool b
 NeedToSvave)
- int APC_Get2ImageWithTimestamp (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, BYTE *pColor ← ImgBuf, BYTE *pDepthImgBuf, unsigned long int *pColorImageSize, unsigned long int *pDepthImageSize, int *pColorSerial, int *pDepthSerial, int nDepthDataType, int64_t *pcur_tv_sec, int64_t *pcur_tv_usec)
- int APC_GetExposureTime (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, int nSensorMode, float *pf
 ExpTimeMS)

get exposure time of ISP setting in millisecond the target sensor type was set in APC SetSensorTypeName()

int APC_SetExposureTime (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, int nSensorMode, float f
 ExpTimeMS)

set exposure time of ISP sensor setting the target sensor type was set in APC_SetSensorTypeName()

int APC_GetGlobalGain (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, int nSensorMode, float *pf
GlobalGain)

get global gain of ISP setting the target sensor type was set in APC_SetSensorTypeName()

int APC_SetGlobalGain (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, int nSensorMode, float fGlobal
Gain)

set global gain of ISP sensor setting the target sensor type was set in APC_SetSensorTypeName()

 int APC_SetSensorTypeName (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, SENSOR_TYPE_NAME stn)

set the sensor type you want to work on

• int APC_GetColorGain (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, int nSensorMode, float *pfGainR, float *pfGainB)

get color gain of ISP setting the target sensor type was set in APC_SetSensorTypeName()

• int APC_SetColorGain (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, int nSensorMode, float fGainR, float fGainB)

set color gain of ISP

bool APC GetThermalFD (void *pHandleEYSD, int *p FD)

get file description of thermal device

- int APC_GetAccMeterValue (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, int *pX, int *pY, int *pZ)
 get acc meter value
- int APC_EnableAE (void *pHandleEYSD, PDEVSELINFO pDevSelInfo)

enable auto exposure(AE) function of ISP

• int APC_DisableAE (void *pHandleEYSD, PDEVSELINFO pDevSelInfo)

disable auto exposure(AE) function of ISP

int APC_EnableAWB (void *pHandleEYSD, PDEVSELINFO pDevSelInfo)

enable auto white balance function of ISP

22 File Documentation

- int APC_DisableAWB (void *pHandleEYSD, PDEVSELINFO pDevSelInfo)
 disable auto white balance of ISP
- int APC_GetAEStatus (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, PAE_STATUS pAEStatus) get auto exposure(AE) is enabled or disable
- int APC_GetAWBStatus (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, PAWB_STATUS pAWBStatus) get auto white balance(AWB) is enabled or disable
- int APC_GetGPIOValue (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, int nGPIOIndex, BYTE *pValue)
 get GPIO values
- int APC_SetGPIOValue (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, int nGPIOIndex, BYTE nValue)
 set GPIO values
- int APC_SetGPIOCtrl (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, int nGPIOIndex, BYTE nValue)
 set GPIO I/O control
- int APC_GetCTPropVal (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, int nld, long int *pValue) get camera terminal(CT) property value By v4l2_control to get control value of camera terminal
- int APC_SetCTPropVal (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, int nld, long int nValue) set camera terminal property values By v4l2_control to set
- int APC_GetPUPropVal (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, int nld, long int *pValue) get processing unit property value by v4l2_control to get processing unit(PU) property value
- int APC_SetPUPropVal (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, int nld, long int nValue) set processing unit property value by v4l2_control to set processing unit(PU) property value
- int APC_GetCTRangeAndStep (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, int nld, int *pMax, int *pMin, int *pStep, int *pDefault, int *pFlags)
 - set camera terminal property values By v4l2_queryctrl to get control values of camera terminal(CT) this enumeration contained the following properties: V4L2_CID_EXPOSURE_AUTO V4L2_CID_EXPOSURE_AUTO_PRIORI←
 TY V4L2_CID_EXPOSURE_ABSOLUTE V4L2_CID_EXPOSURE V4L2_CID_FOCUS_ABSOLUTE V4L2_CID_F←
 OCUS_RELATIVE V4L2_CID_FOCUS_AUTO V4L2_CID_IRIS_ABSOLUTE V4L2_CID_IRIS_RELATIVE V4L2_←
 CID_ZOOM_ABSOLUTE V4L2_CID_ZOOM_RELATIVE V4L2_CID_PAN_ABSOLUTE V4L2_CID_PAN_RELATIVE
 V4L2_CID_TILT_ABSOLUTE V4L2_CID_TILT_RELATIVE V4L2_CID_PRIVACY
- int APC_GetPURangeAndStep (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, int nld, int *pMax, int *pMin, int *pStep, int *pDefault, int *pFlags)
 - get processing unit property value By v4l2_queryctrl to get property values of processing unit(PU) this enumeration contained the following properties: V4L2_CID_BACKLIGHT_COMPENSATION V4L2_CID_BRIGHTNESS V4L2_ \leftarrow CID_CONTRAST V4L2_CID_GAIN V4L2_CID_POWER_LINE_FREQUENCY V4L2_CID_HUE V4L2_CID_HUE \leftarrow AUTO V4L2_CID_SATURATION V4L2_CID_SHARPNESS V4L2_CID_GAMMA V4L2_CID_WHITE_BALANCE \leftarrow TEMPERATURE V4L2_CID_AUTO_WHITE_BALANCE
- int APC_GetCTPUSupportList (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, unsigned char CtPuId, unsigned short int *pValue)
- int APC_SetDepthDataType (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, unsigned short nValue) set depth data type, 11 bit for disparity data, 14 bit for Z data notice: only PUMA type IC can support this setting
- int APC_GetDepthDataType (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, unsigned short *pValue)
 get current depth data type setting
- int APC_SetInterleaveMode (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, bool enable) set depth data type, 11 bit for disparity data, 14 bit for Z data notice: only PUMA type IC can support this setting
- int APC_GetInterleaveMode (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, bool *pValue)
 get current depth data type setting
- int APC_SetCurrentIRValue (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, unsigned short nValue) set infrared radiation(IR) value of PUMA type IC
- int APC_GetCurrentIRValue (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, unsigned short *pValue) get infrared radiation(IR) value of PUMA type IC
- int APC_GetIRMinValue (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, unsigned short *pValue)
 get minimum IR value of camera module
- int APC_SetIRMaxValue (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, unsigned short nValue)
 get maximum IR value of camera module

int APC_GetIRMaxValue (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, unsigned short *pValue)
 get maximum IR value of camera module

int APC_SetIRMode (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, unsigned short nValue)
 enable or disable IRs

• int APC_GetIRMode (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, unsigned short *pValue) to check IR is turn on or off

int APC_GetRectifyLogData (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, eSPCtrl_RectLogData *p
 — Data, int index)

get rectify log data from flash, just for AXES1 device type

int APC_GetRectifyMatLogData (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, eSPCtrl_RectLogData *pData, int index)

get rectify log data from flash, just for PUMA device type

int APC_EnablePostProcess (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, bool bEnable)

Not support now.

int APC_PostInitial (void *pHandleEYSD)

Not support now.

int APC_PostEnd (void *pHandleEYSD)

Not support now.

• int APC_ProcessFrame (void *pHandleEYSD, unsigned char *pYUY2Buf, unsigned char *pDepthBuf, unsigned char *OutputBuf, int width, int height)

Not support now.

int APC_PostSetParam (void *pHandleEYSD, int Idx, int Val)

Not support now.

• int APC_PostGetParam (void *pHandleEYSD, int ldx, int *pVal)

Not support now.

int APC_CreateSwPostProc (int depthBits, void **handle)

create a software post process class

int APC_ReleaseSwPostProc (void **handle)

release a software post process class

 int APC_DoSwPostProc (void *pHandleEYSD, unsigned char *colorBuf, bool isColorRgb24, unsigned char *depthBuf, unsigned char *outputBuf, int width, int height)

do software post process on a depth buffer

• int APC_FlyingDepthCancellation_D8 (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, unsigned char *pdepthD8, int width, int height)

Flying Pixcel Depth Cancellation, just for EX8029.

• int APC_FlyingDepthCancellation_D11 (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, unsigned char *pdepthD11, int width, int height)

Flying Pixcel Depth Cancellation.

 int APC_Convert_Depth_Y_To_Buffer (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, unsigned char *depth_y, unsigned char *rgb, unsigned int width, unsigned int height, bool color, unsigned short nDepth← DataType)

Convert Depth to RGB color or gray.

 int APC_Convert_Depth_Y_To_Buffer_offset (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, unsigned char *depth_y, unsigned char *rgb, unsigned int width, unsigned int height, bool color, unsigned short n← DepthDataType, int offset)

Convert Depth to RGB color or gray, added offset for 3cm baseline.

• int APC EnableSensorIF (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, bool blsEnable)

enable or disable sensor IF

int APC_getUACNAME (char *input, char *output)

Get EYSD UAC Name.

int APC_InitialUAC (char *deviceName)

UAC inital function.

24 File Documentation

int APC_WriteWaveHeader (int fd)

Write Wave Header.

• int APC WriteWaveEnd (int fd, size t length)

Modified Wave Header.

• int APC GetUACData (unsigned char *buffer, int length)

UAC inital function.

• int APC ReleaseUAC (void)

UAC inital function.

int APC InitialFlexibleGyro (void *pHandleEYSD, PDEVSELINFO pDevSelInfo)

gyro sensor inital function

int APC ReleaseFlexibleGyro (void *pHandleEYSD, PDEVSELINFO pDevSelInfo)

gyro sensor release function

 int APC_GetFlexibleGyroData (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, int length, unsigned char *pGyroData)

getting gyro data function

int APC_GetFlexibleGyroLength (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, unsigned short *Gyro
 Len)

getting length of gyro data function.

int APC GetImageInterrupt (void)

Get Image interrupt function Get the image interrupt and then read Gyro data.

• int APC_InitialHidGyro (void *pHandleEYSD, PDEVSELINFO pDevSelInfo)

gyro sensor inital function

• int APC_ReleaseHidGyro (void *pHandleEYSD, PDEVSELINFO pDevSelInfo)

gyro sensor release function

- int APC_GetHidGyro (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, unsigned char *pBuffer, int length) getting gyro data function
- int APC_SetupHidGyro (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, unsigned char *pCmdBuf, int cmdlength)

getting gyro data function

• int APC_GetInfoHidGyro (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, unsigned char *pCmdBuf, int cmdlength, unsigned char *pResponseBuf, int *resplength)

getting gyro data function

• int APC_GenerateLutFile (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, const char *filename)

generate look up table(LUT) for spherical display this function reads the camera user data and generate a LUT file
using for 360 degree preview

• int APC_SaveLutData (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, const char *filename)

Save LUT parameters in the specified file.

• int APC GetLutData (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, BYTE *buffer, int nSize)

Read LUT parameters into the specified buffer.

int APC_EncryptMP4 (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, const char *filename)
 encrypt a H.264 video

• int APC_DecryptMP4 (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, const char *filename)

decrypt a H.264 video was generated by APC EncryptMP4()

• int APC_InjectExtraDataToMp4 (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, const char *filename, const char *data, int dataLen)

APC_InjectExtraDataToMp4.

• int APC_RetrieveExtraDataFromMp4 (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, const char *filename, char *data, int *dataLen)

APC_RetrieveExtraDataFromMp4.

int APC EncryptString (const char *src, char *dst)

APC EncryptString.

int APC_DecryptString (const char *src, char *dst)

APC_DecryptString.

int APC_EncryptString (const char *src1, const char *src2, char *dst)

APC_EncryptString.

int APC DecryptString (const char *src, char *dst1, char *dst2)

APC DecryptString.

- int APC_GetAutoExposureMode (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, unsigned short *mode)

 Get Auto Exposure Mode.
- int APC_SetAutoExposureMode (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, unsigned short mode) Setup Auto Exposure Mode.
- int APC_RotateImg90 (APCImageType::Value imgType, int width, int height, unsigned char *src, unsigned char *dst, int len, bool clockwise)

Rotate the image to 90 degree.

• int APC_RotateImg180 (APCImageType::Value imgType, int width, int height, unsigned char *src, unsigned char *dst, int len)

Rotate the image to 180 degree.

• int APC_ResizeImgToHalf (APCImageType::Value imgType, int width, int height, unsigned char *src, unsigned char *dst, int len)

Resize the image to half.

• int APC_ImgMirro (APCImageType::Value imgType, int width, int height, unsigned char *src, unsigned char *dst)

Make the image to Mirro.

• int APC RGB2BMP (char *filename, int width, int height, unsigned char *data)

RGB to BMF

- int APC_HoleFilled (unsigned short *pDImgIn, unsigned short *pDImgOut, int width, int height, int holeFilldiff)
- int APC_InitialCmdFiFo (const char *pfifoName, int *pFileDescrption, bool bRead)

Cmd FiFo Initial function.

• int APC CloseCmdFiFo (int FileDescrption)

Cmd FiFo Close function.

int APC_WriteCmdFiFo (int FileDescrption, unsigned char *pCmd, int len)

Write Cmd FiFo function.

• int APC ReadCmdFiFo (int FileDescrption, unsigned char *pBuf, int len)

Read Cmd FiFo function.

int APC_InitSRB (void **pSmbHandle, int QueueSize, char *queueName)

Inital the SRB(Share Ring Buffering)

• int APC_PutSRB (void *pSmbHandle, srb_packet_s *pPacket)

Put Packet to SRB.

int APC_GetSRB (void *pSmbHandle, srb_packet_s *pPacket)

Get Packet from SRB.

• int APC_DepthMerge (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, unsigned char **pDepthBufList, float *pDepthMergeOut, unsigned char *pDepthMergeFlag, int nDWidth, int nDHeight, float fFocus, float *pBaseline, float *pWRNear, float *pWRFar, float *pWRFusion, int nMergeNum)

do depth merge

 int APC_GetPointCloud (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, unsigned char *ImgColor, int CW, int CH, unsigned char *ImgDepth, int DW, int DH, PointCloudInfo *pPointCloudInfo, unsigned char *p← PointCloudRGB, float *pPointCloudXYZ, float Near, float Far)

get point cloud

int APC_ColorFormat_to_RGB24 (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, unsigned char *Img←
Dst, unsigned char *ImgSrc, int SrcSize, int width, int height, APCImageType::Value type)

get hardware post processing status

• int APC_ColorFormat_to_BGR24 (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, unsigned char *ImgDst, unsigned char *ImgSrc, int SrcSize, int width, int height, APCImageType::Value type)

26 File Documentation

int APC_RotateImg90 (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, APCImageType::Value imgType, int width, int height, unsigned char *src, unsigned char *dstBuf, int len, bool clockwise)

Make the image to rotate.

• int APC_RotateImg180 (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, APCImageType::Value imgType, int width, int height, unsigned char *src, unsigned char *dst, int len)

Rotate the image to 180 degree.

• int APC_ImgMirro (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, APCImageType::Value imgType, int width, int height, unsigned char *src, unsigned char *dstBuf)

Make the image to Mirro.

• int APC_SubSample (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, unsigned char **SubSample, unsigned char *depthBuf, int bytesPerPixel, int width, int height, int &new_width, int &new_height, int mode=0, int factor=3)

APC_SubSample.

int APC_HoleFill (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, unsigned char *depthBuf, int bytes
 —
 PerPixel, int kernel size, int width, int height, int level, bool horizontal)

APC HoleFill.

• int APC_TemporalFilter (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, unsigned char *depthBuf, int bytesPerPixel, int width, int height, float alpha, int history)

APC TemporalFilter.

• int APC_EdgePreServingFilter (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, unsigned char *depthBuf, int type, int width, int height, int level, float sigma, float lumda)

APC EdgePreServingFilter.

• int APC_ApplyFilters (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, unsigned char *depthBuf, unsigned char *subDisparity, int bytesPerPixel, int width, int height, int sub w, int sub h, int threshold=64)

APC ApplyFilters.

int APC_ResetFilters (void *pHandleEYSD, PDEVSELINFO pDevSelInfo)

APC ResetFilters.

 $\bullet \ \ \text{int APC_EnableGPUAcceleration (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, bool enable)}\\$

APC EnableGPUAcceleration.

• int APC_TableToData (void *pHandleEYSD, PDEVSELINFO pDevSelInfo, int width, int height, int TableSize, unsigned short *Table, unsigned short *Src, unsigned short *Dst)

transfer Src to Dst by Table

int APC_InitPostProcess (void **ppPostProcessHandle, unsigned int nWidth, unsigned int nHeight, APC
 — ImageType::Value imageType)

APC_InitPostProcess.

- int APC_InitPostProcessCustomParameter (void **ppPostProcessHandle, unsigned int nWidth, unsigned int nHeight, APCImageType::Value imageType, POST_PROCESS_PARAMS postProcessParams)
- int APC_PostProcess (void *pPostProcessHandle, unsigned char *pDepthData, unsigned char *filtered ← Frame, APCImageType::Value imageType)
- int APC_ReleasePostProcess (void *pPostProcessHandle)

APC ReleasePostProcess.

- int APC_InitDecimationFilter (void **ppDecimationFilterHandle, unsigned int inWidth, unsigned int inHeight, unsigned int *outWidth, unsigned int *outHeight, APCImageType::Value imageType, DECIMATION_PARA

 MS decimationParams)
- int APC_DecimationFilter (void *pDecimationFilterHandle, unsigned char *pDepthData, unsigned char *filteredFrame, APCImageType::Value imageType)
- int APC_ReleaseDecimationFilter (void *pDecimationFilterHandle)
- int APC GetDeviceNumber (void *pHandleEYSD)

Get the number of composite camera devices (ex: USB camera device) .

int APC_GetSimpleDeviceNumber (void *pHandleEYSD)

Get the number of simple camera devices (ex: MIPI camera device) .

int APC_GetSimpleDevSelectIndex (void *pHandleEYSD, int index)

Get the pointer of PDEVSELINFO for simple camera device.

int APC GetCompositeDevSelectIndex (void *pHandleEYSD, int index)

Get the pointer of PDEVSELINFO for composite camera device.

5.1.1 Detailed Description

functions definitions

5.1.2 Function Documentation

5.1.2.1 APC_ApplyFilters()

APC_ApplyFilters.

Parameters

void	*pHandleEYSD the pointer to the initilized EYSD SDK instance
PDEVSELINFO	pDevSelInfo pointer of device select index
unsigned	char* depthBuf depth buffer pointer
unsigned	char* subDisparity [TODO]
int	bytesPerPixel byte number of one pixel
int	width depth width
int	height depth height
int	sub_w [TODO]
int	sub_h [TODO]
int	threshold [TODO]

Returns

5.1.2.2 APC_CloseCmdFiFo()

Cmd FiFo Close function.

Parameters

```
int | FileDescrption File Description
```

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.3 APC_CloseDevice()

close device and free resource

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.4 APC_CloseDeviceEx()

close device and free resource for warm reset

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.5 APC_CloseDeviceMBL()

close Multiple Base Linedevice and free resource

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.6 APC_ColorFormat_to_RGB24()

get hardware post processing status

void	*pHandleEYSD the pointer to the initilized EYSD SDK instance
PDEVSELINFO	pDevSelInfo pointer of device select index
unsigned	char ∗ImgDst output image buffer
unsigned	char *ImgSrc input image buffer
int	SrcSize sizeof of source image
int	width input image width
int	height input image height
APCImageType::Value	type input image-format

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.7 APC_Convert_Depth_Y_To_Buffer()

```
int APC_Convert_Depth_Y_To_Buffer (
          void * pHandleEYSD,
          PDEVSELINFO pDevSelInfo,
          unsigned char * depth_y,
          unsigned char * rgb,
          unsigned int width,
          unsigned int height,
          bool color,
          unsigned short nDepthDataType )
```

Convert Depth to RGB color or gray.

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
unsigned	char *depth_y depth data,
unsigned	char *rgb output data,
int	width image width,
int	height image height,

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.8 APC_Convert_Depth_Y_To_Buffer_offset()

Convert Depth to RGB color or gray, added offset for 3cm baseline.

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
unsigned	char *depth_y depth data,
unsigned	char *rgb output data,
int	width image width,
int	height image height,
int	offset dpeth_y offset,

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.9 APC_CreateSwPostProc()

create a software post process class

Parameters

int	depthBits depth bit to set
void	**handle handle pointer to this software post process class

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.10 APC_DecimationFilter()

pDecimationFilterHandle	
pDepthData	inWidth * inHeight * 2 (Size of 11 bits disparity) bytes when call
	APC_InitDecimationFilter*APIs.
filteredFrame	outWidth * outWidth * 2 (Size of 11 bits disparity) bytes output buffer.
imageType Generated by Doxygen	APCImageType::Value

Returns

Returns APC_NullPtr if pDepthData or filteredFrame is nullptr. Customized version might return APC_D EVICE_NOT_SUPPORT. APC_POSTPROCESS_INIT_FAIL if developer put the wrong imageType or bad DECIMATION_PARAMS is used.

5.1.2.11 APC_DecryptMP4()

decrypt a H.264 video was generated by APC_EncryptMP4()

Parameters

void*	pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
const	char *filename the input video file for decryption

Returns

success: APC_OK, others:see eSPDI_def.h

5.1.2.12 APC_DecryptString() [1/2]

APC_DecryptString.

Parameters

const	char* src input string
char*	dst output string (decrypted)

Returns

5.1.2.13 APC_DecryptString() [2/2]

APC DecryptString.

Parameters

const	char* src input string
char*	dst1 output string #1 (decrypted)
char*	dst2 output string #2 (decrypted)

Returns

```
success: APC_OK, others:see eSPDI_def.h
```

5.1.2.14 APC_DepthMerge()

do depth merge

void	*pHandleEYSD the pointer to the initilized EYSD SDK instance
PDEVSELINFO	pDevSelInfo pointer of device select index
unsigned	char** pDepthBufList [TODO]
float	*pDepthMergeOut [TODO]
unsigned	char *pDepthMergeFlag [TODO]
int	nDWidth [TODO]
int	nDHeight [TODO]
float	fFocus [TODO]
float	* pBaseline [TODO]
float	* pWRNear [TODO]
float Generated by Doxygen	* pWRFar [TODO]
float	* pWRFusion [TODO]
int	nMergeNum [TODO]

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.15 APC_DisableAE()

disable auto exposure(AE) function of ISP

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.16 APC_DisableAWB()

disable auto white balance of ISP

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.17 APC_DoFusion()

```
int APC_DoFusion (
          unsigned char ** pDepthBufList,
```

```
double * pDepthMerge,
unsigned char * pDepthMergeFlag,
int nDWidth,
int nDHeight,
double fFocus,
double * pBaseline,
double * pWRNear,
double * pWRFar,
double * pWRFusion,
int nMergeNum,
bool bdepth2Byte11bit,
int method )
```

Do Fusion Merge.

Parameters

unsigned	char **pDepthBufList Point to Depth Buffer List
double	*pDepthMerge Point to Fusion output.
unsigned	char ∗pDepthMergeFlag Point to Fusion select fFocus Focus vale
int	nDWidth Image width
int	nDHeight Image Height
double	*pBaseline Point to baseline array m_baselineDist[0] = 30.0; m_baselineDist[1] = 60.0;
	m_baselineDist[2] = 150.0;
double	*pWRNear NearWorkingRange Vecror(Container)
double	*pWRFar FarWorkingRange Vecror(Container)
double	*pWRFusion FusionWorkingRange Vecror(Container)
int	nMergeNum Total merges
int	method method select 0: MBLBase 1: MBRbaseV0 2: MBRbaseV1

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.18 APC_DoSwPostProc()

do software post process on a depth buffer

void*	handle handle of this software post process class
-------	---

Parameters

unsigned	char∗ colorBuf input color buffer
bool	isColorRgb24 is this color buffer RGB888
unsigned	char* depthBuf input depth buffer
unsigned	char* outputBuf output buffer
int	width image width
int	height image height

Returns

success: APC_OK, others: see eSPDI_def.h

5.1.2.19 APC_EdgePreServingFilter()

```
int APC_EdgePreServingFilter (
    void * pHandleEYSD,
    PDEVSELINFO pDevSelInfo,
    unsigned char * depthBuf,
    int type,
    int width,
    int height,
    int level,
    float sigma,
    float lumda )
```

${\sf APC_EdgePreServingFilter}.$

Parameters

void	*pHandleEYSD the pointer to the initilized EYSD SDK instance
PDEVSELINFO	pDevSelInfo pointer of device select index
unsigned	char∗ depthBuf depth buffer pointer
int	bytesPerPixel byte number of one pixel
int	width depth width
int	height depth height
int	level [TODO]
float	sigma [TODO]
float	lumda [TODO]

Returns

5.1.2.20 APC_EnableAE()

enable auto exposure(AE) function of ISP

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.21 APC_EnableAWB()

enable auto white balance function of ISP

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.22 APC_EnableGPUAcceleration()

```
int APC_EnableGPUAcceleration (
    void * pHandleEYSD,
    PDEVSELINFO pDevSelInfo,
    bool enable )
```

 ${\sf APC_EnableGPUAcceleration}.$

Parameters

void	*pHandleEYSD the pointer to the initilized EYSD SDK instance
PDEVSELINFO	pDevSelInfo pointer of device select index
bool	enable enable it or not

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.23 APC_EnableInterleave()

enable or disable interleave function

Parameters

pHandleEYSD	the pointer to the initilized EYSD SDK instance
pDevSelInfo	pointer of device select index
enable	set true to enable interleave, or set false to disable interleave

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.24 APC_EnableSensorIF()

enable or disable sensor IF

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
bool	blsEnable true is enable, false is disable

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.25 APC_EncryptMP4()

encrypt a H.264 video

Parameters

void*	pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
const	char *filename the input video file for encryption

Returns

success: APC_OK, others:see eSPDI_def.h

5.1.2.26 APC_EncryptString() [1/2]

APC_EncryptString.

Parameters

const	char* src input string
char*	dst output string (encrypted)

Returns

success: APC_OK, others:see eSPDI_def.h

5.1.2.27 APC_EncryptString() [2/2]

```
const char * src2,
char * dst )
```

APC_EncryptString.

Parameters

const	char* src1 input string #1
const	char* src2 input string #2
char*	dst output string (encrypted)

Returns

```
success: APC_OK, others:see eSPDI_def.h
```

5.1.2.28 APC_FindDevice()

```
int APC_FindDevice (
     void * pHandleEYSD )
```

find out all EYSD USB devices by PID, VID and ChipID, also remember device types

Parameters

```
void *pHandleEYSD handle
```

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.29 APC_FlyingDepthCancellation_D11()

```
int APC_FlyingDepthCancellation_D11 (
    void * pHandleEYSD,
    PDEVSELINFO pDevSelInfo,
    unsigned char * pdepthD11,
    int width,
    int height )
```

Flying Pixcel Depth Cancellation.

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
unsigned	char *pdepthD11 point toinput depth buffer
int	width depth width
int	height depth height

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.30 APC_FlyingDepthCancellation_D8()

Flying Pixcel Depth Cancellation, just for EX8029.

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
unsigned	char *pdepthD8 point toinput depth buffer
int	width depth width
int	height depth height

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.31 APC_GenerateLutFile()

generate look up table(LUT) for spherical display this function reads the camera user data and generate a LUT file using for 360 degree preview

void*	pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
const	char* filename output LUT file name

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.32 APC_Get2Image()

```
int APC_Get2Image (
    void * pHandleEYSD,
    PDEVSELINFO pDevSelInfo,
    BYTE * pColorImgBuf,
    BYTE * pDepthImgBuf,
    unsigned long int * pColorImageSize,
    unsigned long int * pDepthImageSize,
    int * pColorSerial = 0,
    int * pDepthSerial = 0,
    int nDepthDataType = 0 )
```

get color and/or depth pin images see APC_GetImage for detailed description

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
BYTE	*pColorImgBuf buffer to store color image
BYTE	*pDepthImgBuf buffer to store depth image
unsigned	long int *pColorImageSize the actual color buffer size
unsigned	long int *pDepthImageSize the actual depth buffer size
int	*pColorSerial color serial number
int	*pDepthSerial depth serial number
int	nDepthDataType the depth data type, see definition in eSPDI_def.h

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.33 APC_Get_150_mm_depth()

get color or depth pin image by issuing V4L2's IOCTL to get frame data

Parameters

void	*pHandleEYSD handle	
PDEVSELINFO	pDevSelInfo pointer of device select index	
BYTE	*pDepthImgBuf buffer to store image data	
unsigned	long int *pImageSize the actual buffer size getting from device	
int	*pDepthSerial the serial number for synchronizing depth image	
int	nDepthDataType the depth data type, see definition in eSPDI_def.h	

Returns

success: APC_OK, others: see eSPDI_def.h

5.1.2.34 APC_Get_60_mm_depth()

```
int APC_Get_60_mm_depth (
          void * pHandleEYSD,
          PDEVSELINFO pDevSelInfo,
          BYTE * pBuf,
          unsigned long int * pImageSize,
          int * pSerial = 0,
          int nDepthDataType = 0 )
```

get color or depth pin image by issuing V4L2's IOCTL to get frame data

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
BYTE	*pBuf buffer to store image data
unsigned	long int *pImageSize the actual buffer size getting from device
int	*pSerial the serial number for synchronizing color and depth image
int	nDepthDataType the depth data type, see definition in eSPDI_def.h

Returns

success: APC_OK, others: see eSPDI_def.h

5.1.2.35 APC_Get_Color_30_mm_depth()

```
unsigned long int * pImageSize,
int * pSerial = 0,
int nDepthDataType = 0 )
```

get color or depth pin image by issuing V4L2's IOCTL to get frame data

Parameters

void	*pHandleEYSD handle	
PDEVSELINFO	pDevSelInfo pointer of device select index	
BYTE	*pBuf buffer to store image data	
unsigned	long int *pImageSize the actual buffer size getting from device	
int	*pSerial the serial number for synchronizing color and depth image	
int	nDepthDataType the depth data type, see definition in eSPDI_def.h	

Returns

success: APC_OK, others: see eSPDI_def.h

5.1.2.36 APC_GetAccMeterValue()

```
int APC_GetAccMeterValue (
          void * pHandleEYSD,
          PDEVSELINFO pDevSelInfo,
          int * pX,
           int * pY,
           int * pZ )
```

get acc meter value

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
int	*pX X posiztion
int	*pY Y posiztion
int	*pZ Z posiztion

Returns

success: APC_OK, others: see eSPDI_def.h

5.1.2.37 APC_GetAEStatus()

```
PDEVSELINFO pDevSelInfo,
PAE_STATUS pAEStatus )
```

get auto exposure(AE) is enabled or disable

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
PAE_STATUS	pAEStatus see enum definition as to AE_STATUS in eSPDI_def.h

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.38 APC_GetAutoExposureMode()

Get Auto Exposure Mode.

Parameters

void*	pHandleEYSD handle.	
PDEVSELINFO	pDevSelInfo pointer of device select index.	
unsigned	short* mode pointer of the mode value. 0: Average, 1: Left (or Front) camera, 2: Right (or Back) camera	

Returns

```
success: APC_OK, others:eSPDI_def.h
```

5.1.2.39 APC_GetAWBStatus()

get auto white balance(AWB) is enabled or disable

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
PAWB_STATUS	pAWBStatus see enum definition as to AWB_STATUS in eSPDI_def.h

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.40 APC_GetBusInfo()

get the firmware version of device, the version is a string

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
char	*pszBusInfo Bus information string
int	*pActualLength the actual length of Bus info in byte

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.41 APC_GetColorGain()

```
int APC_GetColorGain (
    void * pHandleEYSD,
    PDEVSELINFO pDevSelInfo,
    int nSensorMode,
    float * pfGainR,
    float * pfGainG,
    float * pfGainB )
```

get color gain of ISP setting the target sensor type was set in APC_SetSensorTypeName()

Parameters

void	*pHandleEYSD handle	
PDEVSELINFO	pDevSelInfo pointer of device select index	
int	nSensorMode which sensor(sensor A, B or Both) to get A is 0, B is 1, Both is 2	
float	*pfGainR pointer of red gain value of ISP setting	
float	*pfGainG pointer of green gain value of ISP setting *pfGainB pointer of blue gain value of ISP setting	
float		

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.42 APC_GetColorImage()

```
int APC_GetColorImage (
    void * pHandleEYSD,
    PDEVSELINFO pDevSelInfo,
    BYTE * pBuf,
    unsigned long int * pImageSize,
    int * pSerial = 0,
    int nDepthDataType = 0 )
```

get color image by issuing V4L2's IOCTL to get frame data

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
BYTE	*pBuf buffer to store image data
unsigned	long int *pImageSize the actual buffer size getting from device
int	*pSerial the serial number for synchronizing color and depth image
int	nDepthDataType reserved, no used.

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.43 APC_GetColorImageWithTimestamp()

```
unsigned long int * pImageSize,
int * pSerial,
int nDepthDataType,
int64_t * pcur_tv_sec,
int64_t * pcur_tv_usec )
```

get color image by issuing V4L2's IOCTL to get frame data

Parameters

void	*pHandleEYSD handle	
PDEVSELINFO	pDevSelInfo pointer of device select index	
BYTE	*pBuf buffer to store image data	
unsigned	long int *pImageSize the actual buffer size getting from device	
int	*pSerial the serial number for synchronizing color and depth image	
int	nDepthDataType reserved, no used.	
int64_t	*pcur_tv_sec seconds in 'v4l2_buffer' timestamp of this image data	
int64_t	*pcur_tv_usec microseconds in 'v4l2_buffer' timestamp of this image data	

Returns

success: APC_OK, others: see eSPDI_def.h

5.1.2.44 APC_GetCompositeDevSelectIndex()

Get the pointer of PDEVSELINFO for composite camera device.

Parameters

void	*pHandleEYSD the pointer to the initilized EYSD SDK instance
int	index device select index

Returns

the device select index for composite camera device

5.1.2.45 APC_GetControlCounterMode()

enable or disable interleave function

Parameters

pHandleEYSD	the pointer to the initilized EYSD SDK instance	
pDevSelInfo	pointer of device select index	
*nValue	pointer to frame counter mode value, 0: Frame Counter Mode, 1: Serial Counter Mode,	

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.46 APC_GetCTPropVal()

get camera terminal(CT) property value By v4l2_control to get control value of camera terminal

this enumeration contained the following properties: V4L2_CID_EXPOSURE_AUTO; V4L2_CID_EXPOSURE_A \leftrightarrow UTO_PRIORITY V4L2_CID_EXPOSURE_ABSOLUTE V4L2_CID_EXPOSURE V4L2_CID_FOCUS_ABSOLUTE V4L2_CID_FOCUS_RELATIVE V4L2_CID_FOCUS_AUTO V4L2_CID_IRIS_ABSOLUTE V4L2_CID_IRIS_REL \leftrightarrow ATIVE V4L2_CID_ZOOM_ABSOLUTE V4L2_CID_ZOOM_RELATIVE V4L2_CID_PAN_ABSOLUTE V4L2_CID \leftrightarrow PAN_RELATIVE V4L2_CID_TILT_ABSOLUTE V4L2_CID_TILT_RELATIVE V4L2_CID_PRIVACY

Parameters

void	*pHandleEYSD handle	
PDEVSELINFO	pDevSelInfo pointer of device select index	
int	nld specifies the member of the property set, see CT Property ID defined in eSPDI_def.h	
int	nt *pValue pointer of store CT property value	

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.47 APC_GetCTRangeAndStep()

```
int APC_GetCTRangeAndStep (
    void * pHandleEYSD,
    PDEVSELINFO pDevSelInfo,
    int nId,
    int * pMax,
    int * pMin,
```

```
int * pStep,
int * pDefault,
int * pFlags )
```

set camera terminal property values By v4l2_queryctrl to get control values of camera terminal(CT) this enumeration contained the following properties: V4L2_CID_EXPOSURE_AUTO V4L2_CID_EXPOSURE_AUTO_PRIOR ITY V4L2_CID_EXPOSURE_ABSOLUTE V4L2_CID_EXPOSURE V4L2_CID_FOCUS_ABSOLUTE V4L2_CID_FOCUS_AUTO V4L2_CID_IRIS_ABSOLUTE V4L2_CID_IRIS_RELATIVE V4L2_CID_IRIS_RELATIVE V4L2_CID_ZOOM_ABSOLUTE V4L2_CID_ZOOM_RELATIVE V4L2_CID_PAN_ABSOLUTE V4L2_CID_PAN_RE LATIVE V4L2_CID_TILT_ABSOLUTE V4L2_CID_TILT_RELATIVE V4L2_CID_PRIVACY

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
int	nld specifies the member of the property set, see CT Property ID defined in eSPDI_def.h
long	int *pMax maximum value, inclusive. This field gives an upper bound for the control
long	int *pMin minimum value, inclusive. This field gives a lower bound for the control
long	int *pStep This field gives a step size for the control see enum https://www.← linuxtv.org/downloads/v4l-dvb-apis-old/vidioc-queryctrl.html how the step value is to be used for each possible control type. Note that this an unsigned 32-bit value
long	int *pDefault The default value of a V4L2_CTRL_TYPE_INTEGER, _BOOLEAN, _BITMASK, _MENU or _INTEGER_MENU control. Not valid for other types of controls. Note that drivers reset controls to their default value only when the driver is first loaded, never afterwards.
long	<pre>int *pFlags control flags, see https://www.linuxtv.↔ org/downloads/v4l-dvb-apis-old/vidioc-queryctrl.html</pre>

Returns

success: APC_OK, others: see eSPDI_def.h

5.1.2.48 APC_GetCurrentIRValue()

get infrared radiation(IR) value of PUMA type IC

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
unsigned	short *pValue current 1 byte IR value setting

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.49 APC_GetDepthDataType()

get current depth data type setting

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
WORD	*pValue pointer of current depth data type in device

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.50 APC_GetDepthImage()

get depth image by issuing V4L2's IOCTL to get frame data

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
BYTE	*pBuf buffer to store image data
unsigned	long int *pImageSize the actual buffer size getting from device
int	*pSerial the serial number for synchronizing color and depth image
int	nDepthDataType the depth data type, see definition in eSPDI_def.h

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.51 APC_GetDepthImageWithTimestamp()

```
int APC_GetDepthImageWithTimestamp (
    void * pHandleEYSD,
    PDEVSELINFO pDevSelInfo,
    BYTE * pBuf,
    unsigned long int * pImageSize,
    int * pSerial,
    int nDepthDataType,
    int64_t * pcur_tv_sec,
    int64_t * pcur_tv_usec )
```

get color image by issuing V4L2's IOCTL to get frame data

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
BYTE	*pBuf buffer to store image data
unsigned	long int *pImageSize the actual buffer size getting from device
int	*pSerial the serial number for synchronizing color and depth image
int	nDepthDataType reserved, no used.
int64_t	*pcur_tv_sec seconds in 'v4l2_buffer' timestamp of this image data
int64_t	*pcur_tv_usec microseconds in 'v4l2_buffer' timestamp of this image data

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.52 APC_GetDeviceInfo()

get informations of EYSD UVC devices, see DEVINFORMATION

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
DEVINFORMATION*	pdevinfo pointer of device information

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.53 APC_GetDeviceInfoMBL_15cm()

get informations of EYSD UVC devices, see DEVINFORMATION

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
DEVINFORMATION*	pdevinfo pointer of device information

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.54 APC_GetDeviceNumber()

Get the number of composite camera devices (ex: USB camera device) .

Parameters

```
void *pHandleEYSD handle
```

Returns

number of composite camera devices

5.1.2.55 APC_GetDeviceResolutionList()

```
PDEVSELINFO pDevSelInfo,
int nMaxCount0,
APC_STREAM_INFO * pStreamInfo0,
int nMaxCount1,
APC_STREAM_INFO * pStreamInfo1 )
```

get the device resolution list

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
int	nMaxCount0 max count of endpoint1 resolutions
APC_STREAM_INFO	*pStreamInfo0 resolution infos of endpoint1
int	nMaxCount1 max count of endpoint2 resolutions
APC_STREAM_INFO	*pStreamInfo1 resolutions infos of endpoint2

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.56 APC_GetExposureTime()

get exposure time of ISP setting in millisecond the target sensor type was set in APC_SetSensorTypeName()

Parameters

void	*pHandleEYSD pHandleEYSD
PDEVSELINFO	pDevSelInfo pointer of device select index
int	nSensorMode which sensor(sensor A, B or Both) to get A is 0, B is 1, Both is 2
float	*pfExpTimeMS pointer of getting exposure time in millisecond by pixel clock, pixel per line, exposure line to get exposure time

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.57 APC_GetFlexibleGyroData()

```
PDEVSELINFO pDevSelInfo,
int length,
unsigned char * pGyroData )
```

getting gyro data function

Parameters

void*	pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
int	length Gyro Data Length
unsigned	char ∗pGyroData pointer of Gyro Data.

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.58 APC_GetFlexibleGyroLength()

getting length of gyro data function.

Parameters

void*	pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
unsigned	short* GyroLen pointer of Gyro Data Lenhth.

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.59 APC_GetFWRegister()

get firmware register value

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
unsigned	short address register address
unsigned	short *pValue pointer of value got from register address
int	flag address and value data length(2 or 1 byte) ie FG_Address_2Byte FG_Value_2Byte is 2 byte address and 2 byte value #define FG_Address_1Byte 0x01 #define FG_Address_2Byte 0x02 #define FG_Value_1Byte 0x10 #define FG_Value_2Byte 0x20

Returns

success: APC_OK, others: see eSPDI_def.h

5.1.2.60 APC_GetFwVersion()

get the firmware version of device, the version is a string

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
char	*pszFwVersion firmware version string
int	nBufferSize input buffer length to receive FW version
int	*pActualLength the actual length of FW version in byte

Returns

success: APC_OK, others: see eSPDI_def.h

5.1.2.61 APC_GetGlobalGain()

get global gain of ISP setting the target sensor type was set in APC_SetSensorTypeName()

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
int	nSensorMode which sensor(sensor A, B or Both) to get A is 0, B is 1, Both is 2
float	*pfGlobalGain pointer of global gain value

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.62 APC_GetHidGyro()

getting gyro data function

Parameters

void*	pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
unsigned	char *pGyroData pointer of Gyro Data Buffer.
int	length Input buffer Length, should be >= 24

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.63 APC_GetHWRegister()

get hardware register value

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
unsigned	short address register address
unsigned	short *pValue pointer of value got from register address
int	flag address and value data length(2 or 1 byte) ie FG_Address_2Byte FG_Value_2Byte is 2 byte address and 2 byte value #define FG_Address_1Byte 0x01 #define FG_Address_2Byte 0x02 #define FG_Value_1Byte 0x10 #define FG_Value_2Byte 0x20

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.64 APC_GetImage()

```
int APC_GetImage (
    void * pHandleEYSD,
    PDEVSELINFO pDevSelInfo,
    BYTE * pBuf,
    unsigned long int * pImageSize,
    int * pSerial = 0,
    int nDepthDataType = 0 )
```

get color or depth pin image by issuing V4L2's IOCTL to get frame data

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
BYTE	*pBuf buffer to store image data
unsigned	long int *pImageSize the actual buffer size getting from device
int	*pSerial the serial number for synchronizing color and depth image
int	nDepthDataType the depth data type, see definition in eSPDI_def.h

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.65 APC_GetImageInterrupt()

Get Image interrupt function Get the image interrupt and then read Gyro data.

Returns

success: 0, others: not got interrupt

5.1.2.66 APC_GetInfoHidGyro()

```
int APC_GetInfoHidGyro (
    void * pHandleEYSD,
    PDEVSELINFO pDevSelInfo,
    unsigned char * pCmdBuf,
    int cmdlength,
    unsigned char * pResponseBuf,
    int * resplength )
```

getting gyro data function

Parameters

void*	pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
unsigned	char *pCmdBuf pointer of Gyro Cmd Buffer.
int	cmdlength Command Lehgth.
unsigned	char *pResponseBuf pointer of ResponseBuffer.
int	resplength Response Length

Returns

success: APC_OK, others: see eSPDI_def.h

5.1.2.67 APC_GetInterleaveMode()

get current depth data type setting

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
bool	*pValue pointer of enable/disable status in device

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.68 APC_GetIRMaxValue()

get maximum IR value of camera module

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
unsigned	short *pValue the maximum 1 byte IR value can be set

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.69 APC_GetIRMinValue()

get minimum IR value of camera module

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
unsigned	short *pValue the minimum 1 byte IR value can be set

Returns

5.1.2.70 APC_GetIRMode()

to check IR is turn on or off

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
unsigned	short *pValue get IR was enabled or not D[7:4]: Reserved D3: Channel 3 D2: Channel 2 D1:
	Channel 1 D0: Channel 0 1: Enable Channel 0: Disable Channel If want to control ch0 and
	ch1, ubMode[3:0] must set to 0x03

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.71 APC_GetLogData()

```
int APC_GetLogData (
     void * pHandleEYSD,
     PDEVSELINFO pDevSelInfo,
     BYTE * buffer,
     int BufferLength,
     int * pActualLength,
     int index,
     CALIBRATION_LOG_TYPE type )
```

get log data from flash

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
BYTE	*buffer buffer to store log data
int	BufferLength input buffer length, must be 4096
int	*pActualLength actual length has written to buffer
int	index index to identify log data for corresponding depth
CALIBRATION_LOG_TYPE	type which calibration log to get

Returns

5.1.2.72 APC_GetLutData()

Read LUT parameters into the specified buffer.

Parameters

void*	pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
BYTE*	buffer memory to store LUT data
int	nSize length of buffer in bytes

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.73 APC_GetMultiBytesHWRegister()

```
int APC_GetMultiBytesHWRegister (
          void * pHandleEYSD,
          PDEVSELINFO pDevSelInfo,
          unsigned short address,
          unsigned char * Data,
          int size,
          int flag )
```

set hardware register

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
unsigned	short address register address
unsigned	char *Data multiple-bytes regigster value to set
int	size multiple-bytes regigster size
int	flag address and value data length(2 or 1 byte) ie FG_Address_1Byte FG_Value_1Byte is 1 byte address and 1 byte value #define FG_Address_1Byte 0x01 #define FG_Address_2Byte 0x02 #define FG_Value_1Byte 0x10 #define FG_Value_2Byte 0x20

Returns

5.1.2.74 APC_GetPidVid()

get PID(product ID) and VID(vendor ID) of device

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
unsigned	short *pPidBuf 4 byte buffer to store PID value
unsigned	short *pVidBuf 4 byte buffer to store VID value

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.75 APC_GetPointCloud()

```
int APC_GetPointCloud (
    void * pHandleEYSD,
    PDEVSELINFO pDevSelInfo,
    unsigned char * ImgColor,
    int CW,
    int CH,
    unsigned char * ImgDepth,
    int DW,
    int DH,
    PointCloudInfo * pPointCloudInfo,
    unsigned char * pPointCloudRGB,
    float * pPointCloudXYZ,
    float Near,
    float Far )
```

get point cloud

void	*pHandleEYSD the pointer to the initilized EYSD SDK instance
PDEVSELINFO	pDevSelInfo pointer of device select index
unsigned	char *ImgColor RGB-buffer
int	CW ImgColor width
int	CH ImgColor height
unsigned	char *ImgDepth depth-buffer
int	DW ImgDepth width
int	DH ImgDepth height

Parameters

PointCloudInfo	*pPointCloudInfo point-cloud information
unsigned	char *pPointCloudRGB point-cloud RGB value
float	*pPointCloudXYZ point-cloud XYZ value
float	Near filter range near dist.
float	Far filter range far dist.

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.76 APC_GetPUPropVal()

get processing unit property value by v4l2_control to get processing unit(PU) property value

this enumeration contained the following properties: V4L2_CID_BACKLIGHT_COMPENSATION V4L2_CID_BR ← IGHTNESS V4L2_CID_CONTRAST V4L2_CID_GAIN V4L2_CID_POWER_LINE_FREQUENCY V4L2_CID_HUE V4L2_CID_HUE_AUTO V4L2_CID_SATURATION V4L2_CID_SHARPNESS V4L2_CID_GAMMA V4L2_CID_W ← HITE_BALANCE_TEMPERATURE V4L2_CID_AUTO_WHITE_BALANCE

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
int	nld specifies the member of the property set see PU property ID defined in eSPDI_def.h
long	int *pValue pointer of store PU property value

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.77 APC_GetPURangeAndStep()

```
int * pMin,
int * pStep,
int * pDefault,
int * pFlags )
```

get processing unit property value By v4l2_queryctrl to get property values of processing unit(PU) this enumeration contained the following properties: V4L2_CID_BACKLIGHT_COMPENSATION V4L2_CID_BRIGHTNESS V4L2 CID_CONTRAST V4L2_CID_GAIN V4L2_CID_POWER_LINE_FREQUENCY V4L2_CID_HUE V4L2_CID_HU CE_AUTO V4L2_CID_SATURATION V4L2_CID_SHARPNESS V4L2_CID_GAMMA V4L2_CID_WHITE_BALAN CE_TEMPERATURE V4L2_CID_AUTO_WHITE_BALANCE

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
int	nld nld specifies the member of the property set, see CT Property ID defined in eSPDI_def.h
long	int *pMax maximum value, inclusive. This field gives an upper bound for the control
long	int *pMin minimum value, inclusive. This field gives a lower bound for the control
long	int *pStep This field gives a step size for the control see enum https://www.← linuxtv.org/downloads/v4l-dvb-apis-old/vidioc-queryctrl.html how the step value is to be used for each possible control type. Note that this an unsigned 32-bit value
long	int *pDefault The default value of a V4L2_CTRL_TYPE_INTEGER, _BOOLEAN, _BITMASK, _MENU or _INTEGER_MENU control. Not valid for other types of controls. Note that drivers reset controls to their default value only when the driver is first loaded, never afterwards.
long	<pre>int *pFlags control flags, see https://www.linuxtv.↔ org/downloads/v4l-dvb-apis-old/vidioc-queryctrl.html</pre>

Returns

success: APC_OK, others: see eSPDI_def.h

5.1.2.78 APC_GetRectifyLogData()

get rectify log data from flash, just for AXES1 device type

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
eSPCtrl_RectLogData *pData 4096 bytes of rectify log data, see eSPCtrl_RectLogData for detailed member	
index,user	data section from 0 \sim 9

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.79 APC_GetRectifyMatLogData()

get rectify log data from flash, just for PUMA device type

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
eSPCtrl_RectLogData	*pData 4096 bytes of rectify log data, see eSPCtrl_RectLogData for detailed members
index,user	data section from 0 \sim 9

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.80 APC_GetRectifyTable()

```
int APC_GetRectifyTable (
          void * pHandleEYSD,
          PDEVSELINFO pDevSelInfo,
          BYTE * buffer,
          int BufferLength,
          int * pActualLength,
          int index )
```

get rectify values (file ID 40+) from flash

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
BYTE	*buffer buffer to store rectify table data
int	BufferLength input buffer length, must be 1024
int	*pActualLength actual length has written to buffer
int	index index(from 0 \sim 9) to identify rectify table for corresponding depth

Returns

```
success:APC_OK, others: see eSPDI_def.h
```

5.1.2.81 APC_GetSensorRegister()

```
int APC_GetSensorRegister (
    void * pHandleEYSD,
    PDEVSELINFO pDevSelInfo,
    int nId,
    unsigned short address,
    unsigned short * pValue,
    int flag,
    SENSORMODE_INFO SensorMode )
```

get value from sensor register

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
int	nld sensor slave address see Videodevice.h for sensor slave address setting
unsigned	short address register address
unsigned	short *pValue pointer of value got from register address
int	flag address and value data length(2 or 1 byte) ie FG_Address_2Byte FG_Value_2Byte is 2 byte address and 2 byte value #define FG_Address_1Byte 0x01 #define FG_Address_2Byte 0x02 #define FG_Value_1Byte 0x10 #define FG_Value_2Byte 0x20
SENSORMODE_INFO	SensorMode sensor mode(sensor A, B or Both) A is 0, B is 1, Both is 2

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.82 APC_GetSerialNumber()

get device serial number

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
BYTE	*pData output buffer to store serial number string
int	nbufferSize pData buffer length in byte, 2 byte(WideChar) is a unit
int	*pLen pointer of actual serial number length

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.83 APC_GetSimpleDeviceNumber()

```
int APC_GetSimpleDeviceNumber ( \mbox{void} \ * \ p\mbox{\it HandleEYSD} \ )
```

Get the number of simple camera devices (ex: MIPI camera device) .

Parameters

void	*pHandleEYSD the pointer to the initilized EYSD SDK instance
------	--

Returns

number of simple camera devices

5.1.2.84 APC_GetSimpleDevSelectIndex()

Get the pointer of PDEVSELINFO for simple camera device.

Parameters

void	*pHandleEYSD the pointer to the initilized EYSD SDK instance
int	index device select index

Returns

the device select index for simple camera device

5.1.2.85 APC_GetSRB()

Get Packet from SRB.

Parameters

void	*pSrbHandle pointer to SRB class	
packet←	*pPacket Input Packet	
_s		

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.86 APC_GetThermalFD()

```
int APC_GetThermalFD ( \label{eq:phandleEYSD} \mbox{ void } * \mbox{ $p$-HandleEYSD,} \\ \mbox{ int } * \mbox{ $p$-FD } \mbox{)}
```

get file description of thermal device

Parameters

void	*pHandleEYSD handle
int	*p_FD file description of thermal device

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.87 APC_GetUACData()

```
int APC_GetUACData (
          unsigned char * buffer,
          int length )
```

UAC inital function.

Parameters

unsigned	char *buffer pointer of UAC buffer
int	length UAC buffer length

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.88 APC_getUACNAME()

Get EYSD UAC Name.

Parameters

char	*input Point to device Address.
char	*output Point to device Name.

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.89 APC_GetUserData()

get user data from flash

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
BYTE	*buffer buffer to store user data
int	BufferLength input buffer length
USERDATA_SECTION_INDEX	usi which user index data to select

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.90 APC_GetYOffset()

get Y offset (file ID 30+) value

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
BYTE	*buffer buffer to store Y offset values
int	BufferLength must be 256
int	*pActualLength the buffer length, always be 256
int	index index value to file ID 30

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.91 APC_GetZDTable()

get disparity and Z values from flash

void	*pHandleEYSD handle	
PDEVSELINFO	pDevSelInfo pointer of device select index	
BYTE	*buffer bufer to store ZD table	
int	BufferLength input buffer length	
int	*pActualLength actual length has written to buffer	
Generalen ABPOXVIIII	pZDTableInfo index to identify ZD table and data type for corrresponding depth	

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.92 APC_HoleFill()

APC_HoleFill.

Parameters

void	*pHandleEYSD the pointer to the initilized EYSD SDK instance	
PDEVSELINFO	pDevSelInfo pointer of device select index	
unsigned	char∗ depthBuf depth buffer pointer	
int	bytesPerPixel byte number of one pixel	
int	kernel_size [TODO]	
int	width depth width	
int	height depth height	
int	level [TODO]	
bool	horizontal [TODO]	

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.93 APC_HoleFilled()

```
int APC_HoleFilled (
          unsigned short * pDImgIn,
          unsigned short * pDImgOut,
          int width,
          int height,
          int holeFilldiff )
```

Hole Filled.

Parameters

unsigned	short *pDImgIn Image Input
unsigned	short *pDImgOut Image Output
int	width image width
int	height image height
int	holeFilldiff Hole filled strangth, value from 0 to 2047.

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.94 APC_ImgMirro() [1/2]

Make the image to Mirro.

Parameters

APCImageType::Value	imgType Image Type
int	width image width
int	height image height
unsigned	char *src image source
unsigned	char *dstBuf image desteration

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.95 APC_ImgMirro() [2/2]

Make the image to Mirro.

Parameters

void	*pHandleEYSD the pointer to the initilized EYSD SDK instance	
PDEVSELINFO	pDevSelInfo pointer of device select index	
APCImageType::Value	imgType Image Type	
int	width image width	
int	height image height	
unsigned	char *src image source	
unsigned	char *dstBuf image desteration	

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.96 APC_Init()

entry point of EYSD camera SDK including 1.create a CEYSD class for accessing oncming APIs 2.find out EYSD devices 3.create a CVideoDevice class for video streaming and hardware access

Parameters

**ppHandleEYSD	a pointer of pointer to access CEYSD class
blsLogEnabled	generate log or not

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.97 APC_InitDecimationFilter()

Parameters

ppDecimationFilterHandle	Handle for user to store.
inWidth	input disparity width
inHeight	input disparity height
outWidth	scale down image width
outHeight	scale down image height
imageType	Currently only support APCImageType::DEPTH_11BITS
decimationParams	Divide resolutions by the factor and round to 4-divisible number. Ex. 1280 / 3 \sim = 428

Returns

APC_POSTPROCESS_INIT_FAIL when null pointers is passed in. APC_OK if no problem.

5.1.2.98 APC_InitialCmdFiFo()

Cmd FiFo Initial function.

Parameters

const	char *pfifoName Point to the cmd fifo name
int	*pFileDescrption Point to the file description
bRead	Indicate Read or Write Cmd fifo

Returns

success: APC_OK, others: see eSPDI_def.h

5.1.2.99 APC_InitialFlexibleGyro()

gyro sensor inital function

void*	pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.100 APC_InitialHidGyro()

gyro sensor inital function

Parameters

void*	pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.101 APC_InitialUAC()

UAC inital function.

Parameters

ohar	*deviceName Point to device Name.
Ciiai	*uevicename Fomit to device name.

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.102 APC_InitPostProcess()

$APC_InitPostProcess.$

Parameters

void	**ppPostProcessHandle
unsigned	int nWidth
unsigned	int nHeight
APCImageType::Value::DEPTH_11BITS,APCImageType::Value::DEPTH_8BITS	

Returns

success: APC_POSTPROCESS_INIT_FAIL or APC_OK

5.1.2.103 APC_InitPostProcessCustomParameter()

Parameters

ppPostProcessHandle	
nWidth	
nHeight	
imageType	APCImageType::Value::DEPTH_11BITS
postProcessParams	Custom setting for filters. Contact with us for more info to match your optical environment. spatial_filter_kernel_size must set to an odd number recommend value is [3, 15]. Larger value is smoother. spatial_filter_outlier_threshold [1, 64]. Smaller value filters out more points.

Returns

APC_POSTPROCESS_INIT_FAIL or APC_OK

5.1.2.104 APC_InitSRB()

Inital the SRB(Share Ring Buffering)

Parameters

void	**pSrbHandle a pointer of pointer to SRB class	
int	QueueSize	
char	srbName SRM Name	

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.105 APC_InjectExtraDataToMp4()

APC_InjectExtraDataToMp4.

Parameters

void*	pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
const	char *filename input video file name
const	char *data video data
const	int dataLen video data length

Returns

```
success: APC_OK, others:see eSPDI_def.h
```

5.1.2.106 APC_IsInterleaveDevice()

check module support interleave function or not

pHandleEYSD	the pointer to the initilized EYSD SDK instance
pDevSelInfo	pointer of device select index

Returns

true: support interleave, false: not support

5.1.2.107 APC_IsMLBaseLine()

Check the device is multiple baseline device.

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index

Returns

true: multiplies baseline device, false: normally device.

5.1.2.108 APC_OpenDevice()

```
int APC_OpenDevice (
    void * pHandleEYSD,
    PDEVSELINFO pDevSelInfo,
    int nEPOWidth,
    int nEPOHeight,
    bool bEPOMJPG,
    int nEP1Width,
    int nEP1Height,
    DEPTH_TRANSFER_CTRL dtc = DEPTH_IMG_NON_TRANSFER,
    bool bIsOutputRGB24 = false,
    void * phWndNotice = 0,
    int * pFPS = 0,
    CONTROL_MODE cm = IMAGE_SN_NONSYNC)
```

the implement layer to open EYSD camera device by V4L2(https://en.wikipedia.org/wiki/~Video4Linux), can open color and depth at one time call, do functions as below,

- initialize the USB device by V4L2 protocol 1.1 query device v4l2 capability 1.2 must have video capability 1.3 must have streaming capability 1.4 issue resolution mode to UVC driver and check result 1.5 initialize memory buffer mapping from kernel to user mode
- 2. enumerate frame interval to set frame rate
- 3. start video capture processes

Parameters

void	*pHandleEYSD handle	
PDEVSELINFO	pDevSelInfo pointer of device select index	
int	nEP0Width width of endpoint1(color) resolution	
int	nEP0Height height of endpoint1(color) resolution	
bool	bEP0MJPG endpoint1 output is MJPEG?	
int	*pFPS input frame rate setting	

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.109 APC_OpenDevice2()

```
int APC_OpenDevice2 (
    void * pHandleEYSD,
    PDEVSELINFO pDevSelInfo,
    int nEPOWidth,
    int nEPOHeight,
    bool bEPOMJPG,
    int nEP1Width,
    int nEP1Height,
    DEPTH_TRANSFER_CTRL dtc = DEPTH_IMG_NON_TRANSFER,
    bool bIsOutputRGB24 = false,
    void * phWndNotice = 0,
    int * pFPS = 0,
    CONTROL_MODE cm = IMAGE_SN_NONSYNC )
```

the implement layer to open EYSD camera device by V4L2(https://en.wikipedia.org/wiki/ \leftarrow Video4Linux), can open color and depth at one time call, do functions as below,

- initialize the USB device by V4L2 protocol 1.1 query device v4l2 capability 1.2 must have video capability
 must have streaming capability 1.4 issue resolution mode to UVC driver and check result 1.5 initialize memory buffer mapping from kernel to user mode
- 2. enumerate frame interval to set frame rate
- 3. start video capture processes

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
int	nEP0Width width of endpoint1(color) resolution
int	nEP0Height height of endpoint1(color) resolution
bool	bEP0MJPG endpoint1 output is MJPEG?
int	nEP1Width width of endpoint2(depth) resolution
int	nEP1Height height of endpoint2(depth) resolution
DEPTH_TRANSFER_CTRL	dtc depth image output transfer

- 1. default is transferred to color(DEPTH_IMG_COLORFUL_TRANSFER) by calling from APC_OpenDevice()
- 2. DEPTH_IMG_GRAY_TRANSFER: transfer to gray
- 3. DEPTH IMG NON TRANSFER: no transfer

Parameters

bool	blsOutputRGB24 output color image is RGB format	
void	*phWndNotice reserved, not use	
int	*pFPS input frame rate setting	
CONTROL_MODE	cm reserved, not use	

Returns

success: APC_OK, others: see eSPDI_def.h

5.1.2.110 APC_OpenDeviceMBL()

the implement layer to open Multiple Base Line EYSD camera device by V4L2(https://en.wikipedia.comg/wiki/Video4Linux), can open color and depth at one time call, do functions as below,

- initialize the USB device by V4L2 protocol 1.1 query device v4l2 capability 1.2 must have video capability
 must have streaming capability 1.4 issue resolution mode to UVC driver and check result 1.5 initialize memory buffer mapping from kernel to user mode
- 2. enumerate frame interval to set frame rate
- 3. start video capture processes

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
int	nEP0Width width of endpoint1(color) resolution
int	nEP0Height height of endpoint1(color) resolution
bool	bEP0MJPG endpoint1 output is MJPEG?
int	nEP1Width width of endpoint2(depth) resolution
int	nEP1Height height of endpoint2(depth) resolution
DEPTH_TRANSFER_CTRL Generated by Doxygen	dtc depth image output transfer

1. default is transferred to color(DEPTH_IMG_COLORFUL_TRANSFER) by calling from APC_OpenDevice()

- 2. DEPTH_IMG_GRAY_TRANSFER: transfer to gray
- 3. DEPTH_IMG_NON_TRANSFER : no transfer

Parameters

bool	blsOutputRGB24 output color image is RGB format
void	*phWndNotice reserved, not use
int	*pFPS input frame rate setting
CONTROL_MODE	cm reserved, not use

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.111 APC_PostProcess()

Parameters

pPostProcessHandle	
pDepthData	disparity buffer.
filteredFrame	filtered disparity.
imageType	APCImageType::Value::DEPTH_11BITS will use CV_16UC1 as computing format.

Returns

```
APC_OK, others: see eSPDI_def.h
```

5.1.2.112 APC_PutSRB()

Put Packet to SRB.

void	*pSrbHandle pointer to SRB class	
packet⇔	*pPacket Input Packet	
_s		

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.113 APC_ReadCmdFiFo()

```
APC_ReadCmdFiFo (
    int FileDescrption,
    unsigned char * pBuf,
    int len )
```

Read Cmd FiFo function.

Parameters

int	FileDescrption File description
unsigned	char *pCmd Point to the cmd buffer
int	lenIndicate the cmd lemgth.

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.114 APC_ReadFlashData()

read firmware code(.bin) form flash The firmware code is the combination of boot loader, firmware body and plug-in data. This input buffer length has to match with the flash data type

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
FLASH_DATA_TYPE	fdt segment type of flash be read
BYTE	*pBuffer buffer to store firmware code
unsigned	long int BufferLength input buffer length
unsigned	long int *pActualLength actual length has written to pBuffer

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.115 APC_RefreshDevice()

```
int APC_RefreshDevice ( \mbox{void} \ * \ p\mbox{\it HandleEYSD} \ )
```

refresh all EYSD UVC devices

Parameters

void	*pHandleEYSD handle
------	---------------------

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.116 APC_Release()

release resource that APC_Init had allocated

Parameters

```
void **ppHandleEYSD array of CEYSD class handlers
```

Returns

none

5.1.2.117 APC_ReleaseDecimationFilter()

pDecimationFilterHandle	handle to be released.

Returns

APC_NullPtr when parameter is nullptr. APC_OK if no problem.

5.1.2.118 APC_ReleaseFlexibleGyro()

```
int APC_ReleaseFlexibleGyro (
     void * pHandleEYSD,
     PDEVSELINFO pDevSelInfo )
```

gyro sensor release function

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.119 APC_ReleaseHidGyro()

gyro sensor release function

Parameters

void*	pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.120 APC_ReleasePostProcess()

APC_ReleasePostProcess.

void	*ppPostProcessHandle the handle to be released.

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.121 APC_ReleaseSwPostProc()

release a software post process class

Parameters

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.122 APC_ReleaseUAC()

```
int APC_ReleaseUAC (
     void )
```

UAC inital function.

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.123 APC_ResetFilters()

APC ResetFilters.

void	*pHandleEYSD the pointer to the initilized EYSD SDK instance
PDEVSELINFO	pDevSelInfo pointer of device select index

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.124 APC_ResetUNPData()

Reset the UNProtection area's datum.

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.125 APC_ResizeImgToHalf()

Resize the image to half.

Parameters

APCImageType::Value	mgType Image Type
int	width image width
int	height image height
unsigned	char *src image source
unsigned	char *dst image desteration
int	len desteration buffer length

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.126 APC_RetrieveExtraDataFromMp4()

APC_RetrieveExtraDataFromMp4.

Parameters

void*	pHandleEYSD handle	
PDEVSELINFO	pDevSelInfo pointer of device select index	
const	char *filename input video file name	
const	char *data video data	
const	int dataLen video data length	

Returns

success: APC_OK, others:see eSPDI_def.h

5.1.2.127 APC_RGB2BMP()

RGB to BMP.

Parameters

*filename	Ouput BMP file name
int	width image width
int	height image height
*data	input RGB buffer.

Returns

success: APC_OK, others: see eSPDI_def.h

5.1.2.128 APC_RotateImg180() [1/2]

Rotate the image to 180 degree.

Parameters

APCImageType::Value	mgType Image Type
int	width image width
int	height image height
unsigned	char *src image source
unsigned	char *dstBuf image desteration
int	len desteration buffer length

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.129 APC_RotateImg180() [2/2]

Rotate the image to 180 degree.

void	* pHandleEYSD the pointer to the initilized EYSD SDK instance	
PDEVSELINFO	pDevSelInfo pointer of device select index	
APCImageType::Value	mgType Image Type	
int	width image width	
int	height image height	
unsigned	char *src image source	
unsigned	char *dstBuf image desteration	
int	len desteration buffer length	

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

Rotate the image to 90 degree.

Parameters

APCImageType::Value	mgType Image Type
int	width image width
int	height image height
unsigned	char *src image source
unsigned	char *dstBuf image desteration
int	len desteration buffer length
bClockwise,false	not supported.
bOpencv	useage, not supported.

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.131 APC_RotateImg90() [2/2]

Make the image to rotate.

Parameters

void	* pHandleEYSD the pointer to the initilized EYSD SDK instance
PDEVSELINFO pDevSelInfo pointer of device select index	
APCImageType::Value	imgType Image Type
int	width image width
int	height image height
unsigned	char *src image source
unsigned	char *dstBuf image desteration
bool	clockwise clockwise rotate or not

Returns

success: APC_OK, others: see eSPDI_def.h

5.1.2.132 APC_SaveLutData()

Save LUT parameters in the specified file.

Parameters

void*	pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
const	char* filename output LUT file name

Returns

success: APC_OK, others: see eSPDI_def.h

5.1.2.133 APC_SelectDevice()

do not support currently

Returns

APC_NotSupport

5.1.2.134 APC_SetAETarget()

set hardware register

Parameters

PDEVSELINFO pDevSelInfo pointer of device select index
int index range from -6 to 9, 0 is default AE
#EV -2.0EV - +3.0EV in 1/3EV step intervals ie [index, EV] => [-6, -2.00EV] [-5, -1.67EV] [-4, -1.33EV] [-3, -1.00EV] [-2, -0.67EV] [-1, -0.33EV] [0, 0.00EV] [1, 0.33EV] [2, 0.67EV] [3, 1.00EV] [4, 1.33EV] [5, 1.67EV] [6, 2.00EV] [7, 2.33EV] [8, 2.67EV] [9, 3.00EV]

Returns

success: APC_OK, others: see eSPDI_def.h

5.1.2.135 APC_SetAutoExposureMode()

Setup Auto Exposure Mode.

void*	pHandleEYSD handle.
PDEVSELINFO	
unsigned	short mode The setup mode value. 0: Average, 1: Left (or Front) camera, 2: Right (or Back)
	camera

Returns

```
success: APC_OK, others:eSPDI_def.h
```

5.1.2.136 APC_SetColorGain()

set color gain of ISP

Parameters

void	*pHandleEYSD handle	
PDEVSELINFO	pDevSelInfo pointer of device select index	
int	nSensorMode which sensor(sensor A, B or Both) to get A is 0, B is 1, Both is 2	
float	fGainR Red channel color gain value	
float	fGainG Green channel color gain value	
float	fGainB Blue channel color gain value	

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.137 APC_SetControlCounterMode()

enable or disable interleave function

pHandleEYSD	the pointer to the initilized EYSD SDK instance
pDevSelInfo	pointer of device select index
nValue	0: Frame Counter Mode, 1: Serial Counter Mode,

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.138 APC_SetCTPropVal()

set camera terminal property values By v4l2_control to set

Parameters

void	pHandleEYSD handle	
PDEVSELINFO	DevSelInfo pointer of device select index	
int	nld specifies the member of the property set see CT Property ID defined in eSPDI_def.h	
long	int nValue CT property value to set	

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.139 APC_SetCurrentlRValue()

set infrared radiation(IR) value of PUMA type IC

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
unsigned	short nValue 1 byte IR value to set

Returns

success: APC_OK, others: see eSPDI_def.h

5.1.2.140 APC_SetDepthDataType()

set depth data type, 11 bit for disparity data, 14 bit for Z data notice: only PUMA type IC can support this setting

Parameters

void	*pHandleEYSD handle	
PDEVSELINFO	pDevSelInfo pointer of device select index	
unsigned	short nValue depth data type you want to set, see APC_DEPTH_DATA_xxx in eSPDI_def.h	

Returns

success: APC_OK, others: see eSPDI_def.h

5.1.2.141 APC_SetExposureTime()

set exposure time of ISP sensor setting the target sensor type was set in APC_SetSensorTypeName()

APC_SetExposureTime(void *pHandleEYSD, PDEVSELINFO pDevSelInfo, int nSensorMode, float fExpTimeMS)

Parameters

void	*pHandleEYSD handle	
PDEVSELINFO	pDevSelInfo pointer of device select index	
int	nSensorMode which sensor(sensor A, B or Both) to set A is 0, B is 1, Both is 2	
float	fExpTimeMS pointer of setting exposure time in millisecond check sensor spec for detailed setting, we need pixel clock, pixel per line, V blank and exposure line	

Returns

success: APC_OK, others: see eSPDI_def.h

5.1.2.142 APC_SetFWRegister()

```
PDEVSELINFO pDevSelInfo, unsigned short address, unsigned short nValue, int flag )
```

set firmware register value

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
unsigned	short address register address
unsigned	short nValue register value to set
int	flag address and value data length(2 or 1 byte) ie FG_Address_1Byte FG_Value_1Byte is 1 byte address and 1 byte value #define FG_Address_1Byte 0x01 #define FG_Address_2Byte 0x02 #define FG_Value_1Byte 0x10 #define FG_Value_2Byte 0x20

Returns

success: APC_OK, others: see eSPDI_def.h

5.1.2.143 APC_SetGlobalGain()

set global gain of ISP sensor setting the target sensor type was set in APC_SetSensorTypeName()

Parameters

void	*pHandleEYSD handle	
PDEVSELINFO	pDevSelInfo pointer of device select index	
int	nSensorMode which sensor(sensor A, B or Both) to get A is 0, B is 1, Both is 2	
float	fGlobalGain pointer of global gain value	

Returns

success: APC_OK, others: see eSPDI_def.h

5.1.2.144 APC_SetHWRegister()

```
PDEVSELINFO pDevSelInfo, unsigned short address, unsigned short nValue, int flag )
```

set hardware register

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
unsigned	short address register address
unsigned	short nValue register value to set
int	flag address and value data length(2 or 1 byte) ie FG_Address_1Byte FG_Value_1Byte is 1 byte address and 1 byte value #define FG_Address_1Byte 0x01 #define FG_Address_2Byte 0x02 #define FG_Value_1Byte 0x10 #define FG_Value_2Byte 0x20

Returns

success: APC_OK, others: see eSPDI_def.h

5.1.2.145 APC_SetInterleaveMode()

set depth data type, 11 bit for disparity data, 14 bit for Z data notice: only PUMA type IC can support this setting

Parameters

void	*pHandleEYSD handle	
PDEVSELINFO	pDevSelInfo pointer of device select index	
bool	enable enable/disable interleave mode see APC_DEPTH_DATA_xxx in eSPDI_def.h	

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.146 APC_SetIRMaxValue()

get maximum IR value of camera module

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
unsigned	short nValue the IR maximum setting value

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.147 APC_SetIRMode()

enable or disable IRs

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
unsigned	short nValue 8 bit definition as below to turn on/off IR D[7:4]: Reserved D3: Channel 3 D2: Channel 2 D1: Channel 1 D0: Channel 0 1: Enable Channel 0: Disable Channel If want to control ch0 and ch1, ubMode[3:0] must set to 0x03

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.148 APC_SetLogData()

set log data to flash

void *pHandleEYSD handle

Parameters

PDEVSELINFO	pDevSelInfo pointer of device select index
BYTE	*buffer log data to set
int	BufferLength buffer length, must be 4096
int	*pActualLength always return 4096
int	index index to identify log data for corresponding depth

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.149 APC_SetMultiBytesHWRegister()

set hardware register

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
unsigned	short address register address
unsigned	char *Data multiple-bytes regigster value to set
int	size multiple-bytes regigster size
int	flag address and value data length(2 or 1 byte) ie FG_Address_1Byte FG_Value_1Byte is 1 byte address and 1 byte value #define FG_Address_1Byte 0x01 #define FG_Address_2Byte 0x02 #define FG_Value_1Byte 0x10 #define FG_Value_2Byte 0x20

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.150 APC_SetPidVid()

set PID and VID to device

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
unsigned	short *pPidBuf 4 byte PID value buffer to set
unsigned	short *pVidBuf 4 byte VID value buffer to set

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.151 APC_SetPUPropVal()

set processing unit property value by v4l2_control to set processing unit(PU) property value

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
int	nld specifies the member of the property set see PU Property ID defined in eSPDI_def.h
int	nValue value to set

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.152 APC_SetRectifyTable()

set rectify values to flash

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
BYTE	*buffer rectify values to set
int	BufferLength bufer length, must be 1024
int	*pActualLength always return 1024
int	index index(from 0 \sim 9) to identify rectify table for corresponding depth

Returns

success: APC_OK, others: see eSPDI_def.h

5.1.2.153 APC_SetRootCipher()

enter root cipher

Set the correct root to do un-protect flash when writing parameters of camera.

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
const	char* cipher cipher string

Returns

success: APC_OK, others: see eSPDI_def.h

Parameters

void	*pHandleEYSD the pointer to the initilized EYSD SDK instance
PDEVSELINFO	pDevSelInfo pointer of device select index
const	char* cipher root

Returns

success: APC_OK, others: see eSPDI_def.h

5.1.2.154 APC_SetSensorRegister()

set sensor register value

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
int	nld sensor slave address see Videodevice.h for sensor slave address setting
unsigned	short address register address
unsigned	short nValue value to set
int	flag address and value data length(2 or 1 byte) ie FG_Address_1Byte FG_Value_1Byte is 1 byte address and 1 byte value #define FG_Address_1Byte 0x01 #define FG_Address_2Byte 0x02 #define FG_Value_1Byte 0x10 #define FG_Value_2Byte 0x20
SENSORMODE_INFO	SensorMode sensor mode(sensor A, B or Both) A is 0, B is 1, Both is 2

Returns

success: APC_OK, others: see eSPDI_def.h

5.1.2.155 APC_SetSensorTypeName()

set the sensor type you want to work on

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
SENSOR_TYPE_NAME	stn which sensor you want to work on

Returns

success: APC_OK, others: see eSPDI_def.h

5.1.2.156 APC_SetSerialNumber()

set serial number to device

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
BYTE	*pData pointer of buffer to store serial number, it is WildChar
int	nLen pData length in byte

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.157 APC_Setup_v4l2_requestbuffers()

Setup v4l2 request buffers, default = 4.

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
int	cnt Should be >= 0

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.158 APC_SetupBlock()

get color or depth pin image by issuing V4L2's IOCTL to get frame data

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
bool	enable Enable the Blocking mode or not)

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.159 APC_SetupHidGyro()

getting gyro data function

Parameters

void*	pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
unsigned	char *pGyroData pointer of Gyro Data Buffer.
int	length Input buffer Length, shoul

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.160 APC_SetUserData()

set user data to flash

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
BYTE	*buffer user buffer data to set
int	BufferLength buffer length to write
USERDATA_SECTION_INDEX	usi which user section data to set

Generated by Doxygen

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.161 APC_SetYOffset()

set Y offset values

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
BYTE	*buffer buffer data to set
int	BufferLength buffer length
int	*pActualLength always return 256
int	index index value to file ID 30

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.162 APC_SetZDTable()

```
int APC_SetZDTable (
    void * pHandleEYSD,
    PDEVSELINFO pDevSelInfo,
    BYTE * buffer,
    int BufferLength,
    int * pActualLength,
    PZDTABLEINFO pZDTableInfo )
```

set disparity and Z values to flash

Parameters

void	*pHandleEYSD handle
PDEVSELINFO	pDevSelInfo pointer of device select index
BYTE	*buffer ZD values to set
int	BufferLength corresponding length of ZD table in buffer
int	*pActualLength buffer lenth written to flash, should be same as BufferLength
GeRezeletABbez/glfnO	pZDTableInfo index and depth type of this ZD

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.163 APC_SubSample()

```
int APC_SubSample (
    void * pHandleEYSD,
    PDEVSELINFO pDevSelInfo,
    unsigned char ** SubSample,
    unsigned char * depthBuf,
    int bytesPerPixel,
    int width,
    int height,
    int & new_width,
    int & new_height,
    int mode = 0,
    int factor = 3 )
```

APC_SubSample.

Parameters

void	*pHandleEYSD the pointer to the initilized EYSD SDK instance
PDEVSELINFO	pDevSelInfo pointer of device select index
unsigned	char **SubSample [TODO]
unsigned	char ∗depthBuf depth buffer pointer
int	bytesPerPixel byte number of one pixel
int	width depth width
int	height depth height
int&	new_width new depth width
int&	new_height new depth height
int	mode [TODO]
int	factor [TODO]

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.164 APC_SwitchBaseline()

Swich the baseline index.

Parameters

```
int index Baseline index 1: 30 mm 2: 60 mm 3: 150 mm
```

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.165 APC_TableToData()

transfer Src to Dst by Table

Parameters

void	*pHandleEYSD the pointer to the initilized EYSD SDK instance
PDEVSELINFO	pDevSelInfo pointer of device select index
int	width input image width
int	height input image height
int	TableSize input Table size in bytes
unsigned	short *Table input Table buffer
unsigned	short *Src input Src buffer
unsigned	short *Dst output Dst buffer

Returns

```
success: APC_OK, others: see eSPDI_def.h
```

5.1.2.166 APC_TemporalFilter()

```
int APC_TemporalFilter (
     void * pHandleEYSD,
     PDEVSELINFO pDevSelInfo,
     unsigned char * depthBuf,
     int bytesPerPixel,
     int width,
```

```
int height,
float alpha,
int history )
```

APC_TemporalFilter.

Parameters

void	*pHandleEYSD the pointer to the initilized EYSD SDK instance
PDEVSELINFO	pDevSelInfo pointer of device select index
unsigned	char∗ depthBuf depth buffer pointer
int	bytesPerPixel byte number of one pixel
int	width depth width
int	height depth height
float	alpha [TODO]
int	history [TODO]

Returns

success: APC_OK, others: see eSPDI_def.h

5.1.2.167 APC_WriteCmdFiFo()

```
int APC_WriteCmdFiFo (
    int FileDescrption,
    unsigned char * pCmd,
    int len )
```

Write Cmd FiFo function.

Parameters

int	FileDescrption File description
unsigned	char *pCmd Point to the cmd buffer
int	lenIndicate the cmd lemgth.

Returns

success: APC_OK, others: see eSPDI_def.h

5.1.2.168 APC_WriteFlashData()

```
PDEVSELINFO pDevSelInfo,
FLASH_DATA_TYPE fdt,
BYTE * pBuffer,
unsigned long int BufferLength,
bool bIsDataVerify,
KEEP_DATA_CTRL kdc )
```

write firmware code(.bin) to flash The firmware code is the combination of boot loader, firmware body and plug-in data, also can keep original functions(Serial Number, Sensor Position, RectificationTable, ZD Table and CalibrationLog) on camera flash by KEEP_DATA_CTRL control

Parameters

void	*pHandleEYSD CEronDI class
PDEVSELINFO	pDevSelInfo pointer of device select index
FLASH_DATA_TYPE	fdt segment type of flash be wrote
BYTE	*pBuffer buffer of firmware code
unsigned	long int BufferLength Buffer length to be wrote
BOOL	blsDataVerify write data verification flag, if true this function will read data again and do a byte to byte comparison
KEEP_DATA_CTRL	kdc keep function flags

Returns

success: APC_OK, others: see eSPDI_def.h

5.1.2.169 APC_WriteWaveEnd()

Modified Wave Header.

Parameters

```
int fd wave file descript.
```

Returns

success: APC_OK, others: see eSPDI_def.h

5.1.2.170 APC_WriteWaveHeader()

Write Wave Header.

Parameters

int | fd wave file descript.

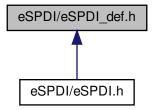

Returns

success: APC_OK, others: see eSPDI_def.h
